## Classic travertino UNFILLED

Classic Travertine is a calcareous sedimentary rock. It is a beautiful and resistant natural stone over time. Classic Travertine is mainly light beige in colour, uniform with characteristic parallel veins, but it is also possible to find rare, more marked veins. The porosity of Travertine is filled to increase the levels of resistance and compactness and for hygienic reasons, especially for surfaces of daily use. In this version, it is offered **UNFILLED** to enhance the natural beauty of the stone itself.

For a correct seal, it is recommended not to pour acid substances such as carbonated and / or alcoholic drinks, oils, wine, vinegar, citrus fruits or to remove them immediately, so as not to damage the polishing. For cleaning, we recommend very delicate products, without thinners or corrosive substances. Subjected to astain-resistant treatment. As marble is a natural product, any visible defects are to be considered as characteristics of the marble itself. As marble is a natural material, the veins and color tones can vary from slab to slab. Therefore the images are to be considered purely indicative.

## Colour Variations
